Mirrors:
Standard 1/4" Mirror
Beveled Mirrors
Antique Mirrors

Custom Shower Doors
Steam Units
Interior Glass
Wine Rooms
Gym Doors
Gym Mirrors
Kitchen Backsplash (Back Painted Glass)

HydroClear Protection

If you were to put glass under a microscope, it would look like a sponge. Glass is actually a porous material. HydroClear Protected Glass is the glass industry's attempt to "fill in the holes" and make the glass less pervious to minerals, soap spots and bathroom products. It does not alleviate the need to squeegee and regularly clean the glass. It does, however, help the water wick off the glass more quickly.

Low Iron Glass

The reduction in iron content gives the glass a higher degree of transparency compared to standard float glass, which often has a slight greenish tint due to the iron content. The low iron content results in a glass that is clearer and more true in color, making it ideal for applications where clarity and aesthetics are important.

Standard Clear *Low Iron*
